The Trolley Problem Just Got Digital - *Ethical dilemmas in Programming the Autonomous Vehicle*

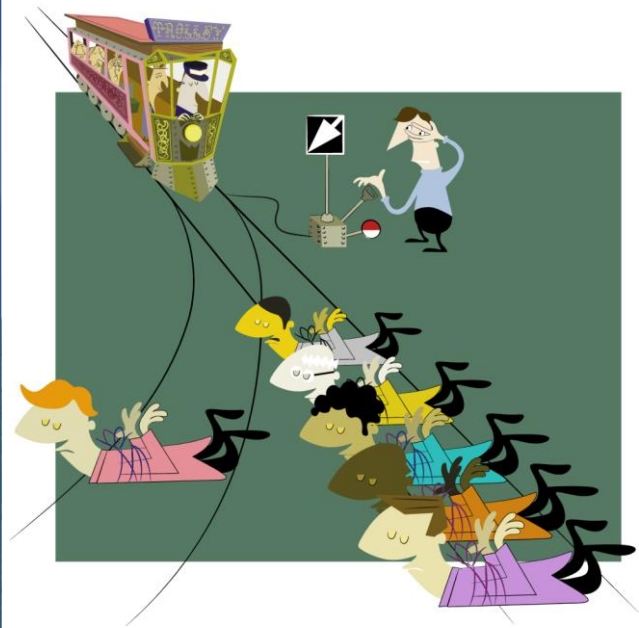

Autonomous vehicles will save thousands of lives by their precision driving; yet there may be occasions in which they will have to resolve life and death moral dilemmas. How should they decide?

BIO

Rabbi Mois Navon is one of the founding engineers of Mobileye. Having designed the System-On-A-Chip and holding several patents in the hardware, he is intimately familiar with the system that is driving – literally – the autonomous car revolution. In addition, Mois became known as the “Rabbi of Mobileye” for his answering of halachic questions at Mobileye on a personal and corporate level, giving a daily halacha and teaching a well-attended weekly shiur to religious and non-religious employees. This presentation is the result of one of those shiurim.

The Trolley Problem

The Autonomous Future ... is here!
